

**THE FUTURE OF AUTOMOTIVE GLASS**

**AGR PRODUCT RANGE**

January 2021

# Quality Certificate

This is to certify that all replacement glazing produced by Saint-Gobain Sekurit, and therefore carrying the Sekurit logo, are manufactured using the same specifications and production standards as Original Equipment used in the assembly of vehicles. Therefore, these glazing of the same quality as OE parts are "Original Spare Parts."

# WHY? use Saint-Gobain Sekurit Original Spare Parts?

In the automotive aftermarket all glazing is required to comply with the minimum safety standards set by the R43-regulation. But there are no standards for quality control. At Saint-Gobain Sekurit, we think quality makes all the difference. That's why we manufacture replacement glazing using the same specifications and production standards as original equipment. Glazing has become a very important part of the body structure. More than 50% of interior noise enters through the windscreen. Using inferior parts can lead to a substantial number of other issues, such as:

- ▶ Diminished working of windscreen wipers
- ▶ Structure issues, as glazing doesn't comply with car specifications
- ▶ View-distortion, leading to eyestrain, fatigue and headaches
- ▶ Whistle and stress noise
- ▶ Less than perfect view, resulting in safety issues
- ▶ Excessive play on the mirror because of non-identical mirror bracket
- ▶ Water issues caused by inferior hardware
- ▶ Premature weathering and deterioration of the fitting hardware
- ▶ Reduced operation of driver assistance systems

For a fitter, using inferior parts can result in a non-professional and non-practical fitting of new glazing. This can highly influence the image of a fitting station. Not to mention the time-consuming effort it takes to make the glass fit or even the possible damage to the car.

## THAT'S WHY

# THE FUTURE OF AUTOMOTIVE GLASS

## THERMAL CONTROL

### SUSTAINABLE SUN PROTECTION

Make heat protection a priority, and enjoy some of the coolest summers. Because they reflect both infra-red and UV rays, they will reduce your car interior temperature during summers faster than ever before with reduced A/C, and decrease your energy consumption.

## ACOUSTIC CONTROL

### RELAX AND ENJOY A QUIETER DRIVE

Because driving can be tiring and you need energy to focus on the road, Saint-Gobain Sekurit has designed the dBControl® glass to sharply reduce exterior and interior noises or vibrations.

## DESIGN AND STYLE

### COMPLEX GLASS SHAPES

Sekurit has already tried and tested a range of techniques able to shape complex glass parts, including large windshields and real glass backlite.

## ENERGY EFFICIENCY

### GLASS AS LIGHT AS A FEATHER

The dedication of our research teams in the last years allowed Saint-Gobain Sekurit to reduce the thickness of our glazing for an increased performance. Thanks to this reduction, it is possible to save more than 6 kg of glass on a whole car.

## VISUAL COMFORT

### BETTER VISIBILITY

Innovation in manufacture and design ensure better visibility leading to an enhanced drive experience. Improved visual acuity can reduce fatigue making driving safe and pleasurable.
